+ INSIGHT LABS

In Search of the Role of the Body in Modern Society

Lab 8: Human Nature & Artificial Intelligence - a Discourse

Guest: Prof. Hermann Klöckner

June 1st 2022, 4.30 – 6 pm (CEST)

Our Guest: Professor Hermann Klöckner is a design researcher and professor who explores new forms of interaction, systemic behavior and human experience. He is a professor for Interaction Design at Anhalt University of Applied Sciences at the Bauhaus Dessau where he teaches in the fields of User Experience, Data Visualization, Parametric Design and Artificial Intelligence. He is also founder and shareholder of CAVORIT Consulting, a Berlin-based start up innovating human aspects of Data Science whose passion is to empower user-centric innovation. He is a father and a sailor.

HUMAN NATURE & ARTIFICIAL INTELLIGENCE – A DISCOURSE

Throughout our evolution, our amazing and versatile hands became free as we began to walk upright. Our field of vision became wider. Our field of possibilities grew larger. Yet now we look down more and more; our circles of activity are becoming smaller and smaller. We are quickly losing what makes us human: our freedom. So how do we learn to look up again? How do we re-learn to grasp our freedom? What could a renaissance of unspecific free thinking and acting look like? In a talk that aims to open discussion and ask more questions than it answers, we will start to explore what can be created in a world beyond screens.

45-MINUTE INTERACTIVE INSIGHT LAB:

In the Insight Lab we will explore aspects of the talk through simple physical exercises and discussion.

The Insight Lab will be led by **Emily Poel**, co-founder of Embodiment at Work and a member of difgl. Emily has worked internationally as achoreographer, performer and creative consultant and has been an embodiment practitioner and trainer in Berlin since 2004.

Please Note: *This event will take place in English.*
